Left: Insect meshes and solar fabrics provide 40-80% UV block whilst retaining your view  
 Top right: Keep interiors cool and reduce glare  
 Bottom right: Privacy and solar shading

## Power screens tailored to your requirements

Executive power screens suit a range of commercial applications as they provide ventilation, solar shading, insect protection and increased privacy for openings up to 7m across and 4.8m high. The screens can be fitted either internally or externally to block UV rays and reduce heat gain and glare.

Executive screens can be linked to building management systems or fitted with sensors, so that they automatically deploy or retract to regulate the temperature. This makes them ideal for commercial buildings like showrooms, retail units or office buildings as they reduce air conditioning costs and create a more pleasant working environment. They can also be fitted with blackout fabrics to suit applications where unwanted light is a problem (e.g. projection rooms or photographic darkrooms).

Executive screens are perfect for hospitality applications like restaurants, cafés and hotels as they can be fitted to windows and doors to let fresh air in whilst protecting against insects and UV rays.

They can also be added to external structures to create additional outdoor spaces where customers can enjoy an alfresco dining experience without being disturbed by unwanted visitors. The screens protect against light rain and outdoor debris like grass and leaves and can retain heat from outdoor heaters when fitted with solar mesh, so that restaurateurs can generate additional revenue from their outdoor space during spring and autumn too.

### FEATURES

- Screens up to 7m widths
- Retracts vertically
- Range of performance fabrics and colour options
- Optional sun and wind sensors to automatically adjust screen position
- Weighted slidebar
- In-wall or hand-held remote controls
- Can be linked to building management systems
- Can be surface or reveal mounted
- Can be recessed into walls and ceiling cavities
- Can be mounted internally or externally

### BENEFITS

- Solar shading to prevent heat build-up and glare
- Increase ventilation to cool and freshen interiors
- Protect against insects
- Screen outdoor areas to expand your space
- Privacy at the touch of a button
- Lower air conditioning costs

### PERFORMANCE FABRICS

The Executive can be fitted with a range of technical fabrics to suit your requirements including standard and anti-midge insect meshes, solar shading and privacy/blackout fabrics.
